

Fig. 2 The verification chain: WHAT + WHO + WHEN, checkable offline

Each leg is a real command run against the exported artifacts

WHAT

Tamper-evident audit trail

`openmiura db verify-chain`

PASS

`all chains intact · exit 0`

WHO

Signed, signer-bound evidence pack

`openmiura verify <pack> --trust-anchor <fpr>`

PASS

`VERIFIED · authoritative · exit 0`

WHEN

RFC 3161 trusted timestamp

`openmiura verify <stamped-pack>`

PASS

`genTime 2026-07-25T16:14:04+00:00 · exit 0`

All three verified with only the cryptography library — no server, no database, no network at verify time.
